

HPXdrive Technology Excavator

A-SERIES HPXdrive

The multi purpose grabs are true multi-functional tools: positioning natural rocks, picking up brushwood & branches, easy sorting tasks. The sophisticated ergonomics and the design of the shells enable loading, sorting, digging and demolition operations with maximum efficiency. Bolt-on side plates and a 4-point soft gripping device for the handling of e.g. manhole rings provide even more flexibility.

POSSIBLE SHELL COMBINATIONS:

- ▷ A04HPX – D04HPX
- ▷ A06HPX – D06HPX – T06HPX-3Z
- ▷ A09HPX – D09HPX – T09HPX-3Z

**C-SERIES HPXdrive**

The clamshell buckets (C05HPX & C08HPX) prove their value especially during digging or backfilling tasks. The closing forces are constant and high during the entire opening and closing process.

POSSIBLE SHELL COMBINATIONS:

- ▷ C05HPX – R05HPX
- ▷ C08HPX – R08HPX

**D-SERIES HPXdrive**

The strong demolition and sorting grabs are well-suited for demolition and separation of all kinds of building materials and waste. The robust rotations with direct internal hydraulic connections guarantee a precise position, an optimum force transmission and prevent damages.

POSSIBLE SHELL COMBINATIONS:

- ▷ D04HPX – A04HPX
- ▷ D06HPX – A06HPX – T06HPX-3Z
- ▷ D09HPX – A09HPX – T09HPX-3Z

**R-SERIES HPXdrive**

The rock grabs are ideal for the gripping and positioning of natural stones and rocks. Thanks to the constant closing forces during the entire gripping process and the integrated non-return valve, a safe positioning of natural stones and rocks is no problem, even in the case of pressure drops.

POSSIBLE SHELL COMBINATIONS:

- ▷ R05HPX – C05HPX
- ▷ R08HPX – C08HPX

**T-SERIES HPXdrive**

The timber grabs combine the reliability of the revolutionary HPXdrive with robust timber tines. Clamping single or several trunks is no problem at all thanks to the high constant closing forces.

POSSIBLE SHELL COMBINATIONS:

- ▷ T06HPX-3Z – A06HPX – D06HPX
- ▷ T09HPX-3Z – A09HPX – D09HPX

Functional exchange, depending on demands!

During times of growing costs and environmental awareness, efficient working is getting more and more important. The HPXdrive stands out thanks to its extended lifetime compared to a conventional cylinder-driven grab. Not only the maintenance downtimes are reduced but also the operational expenses. The integrated shell exchange system and the different available shell options provide for a higher flexibility on the one hand, and lower the asset cost for additional attachments on the other hand.

CUSTOMER BENEFITS:**FLEXIBLE OPERATION**

Fast and uncomplicated response to requirements to be more competitive.

LOW MAINTENANCE

No greasing points at the HPXdrive that need to be lubricated on a daily basis, saving time and maintenance costs.

LESS WEAR

The compact and extremely robust design without hydraulic cylinders or short hoses lower the risk of damages.

HIGHER EFFICIENCY

More powerful working thanks to constant closing forces during the entire gripping performance. The tasks can thus be finished faster and the wear is kept to a minimum.

Compact design

The compact and very robust design of the HPXdrive unit has no greasing points and combined with a KINSHOFER directly mounted rotator, there are no short connecting hoses required anymore (internal hydraulic connections).

OPEN

CENTER POSITION

CLOSED

Hydraulic drive unit HPXdrive

CLOSING FORCE

Compared to conventional cylinder grabs, the closing force of the HPXdrive is high and constant during the entire operation. The movement of the arms is generated by two hollow shafts, which run oppoed and have a helix thread, hydraulically driven by a single piston. The resulting closing force is always the same no matter the position of the shells.

STARTING POSITION:
Shells are orderly fixed

STEP 1:
Loosen 4 retaining bolts on one side

STEP 2:
Remove loose bolts and clamping parts and place exchange aid

STEP 3:
Loosen bolts on other side, Remove bolts and clamping parts and place exchange aid

CHANGE POSITION:
HPXdrive is loose

STEP 4:
Lift HPXdrive and position above other shells

STEP 5:
First remove exchange aids and bolt on clamping parts on one side, then repeat on the other side

FINAL POSITION:
Shells are orderly fixed

Exchange of shells with HPXdrive

Thanks to the shell exchange system you are able to clearly lower the investment costs for your fleet. Just change fast and easy to the suitable shell option depending on the task. The reliable shell exchange system features an easy loosening of the shells in case of exchange and a safe and steady holding of loads during every task. Setup times can be reduced to a minimum. The flexibility of your work processes as well as your competitive abilities can be increased.

Rigid mount up to 9t

FUNCTION:
SHAFT & PISTON

The linear shift of the piston is converted into a rotary motion of the two shafts by counter-rotating helix threads. The use of a compensation rod for shell synchronisation is not necessary and the generated closing forces are constant and high. They remain constant during the entire operation.

SYSTEM:
EXCHANGE OF SHELLS

The hydraulic drive is equipped with a simple shell exchange system, providing for a 5-step-exchange within 10 minutes. You can change to different shells e.g. demolition grab, clamshell bucket or timber grab, using only one drive unit. The nitrided shafts and piston feature a robust surface resulting in a minimized wear.

STRUCTURE:
UNIT

The Kinshofer rotator and the HPXdrive form a compact and robust unit. It withstands external forces with the hydraulic connections being direct and located inside, there are no short hoses necessary. Therefore, leaks due to damaged hose cannot happen and allow the use in water protection areas. As the drive unit runs in a permanent oil bath, there is no lubrication necessary.

SAFETY:
SAFETY VALVES

The HPXdrive is equipped with a pressure relief valve protecting the grab from overcharge. The integrated non-return valve guarantees a secure retention of loads. An installation of valves at the carrier machine is not necessary.

Hydraulic drive unit for rigid mount up to 9t

Type	Tonnage	Opening	Load capacity (form locking)
A04HPX	2 - 4t / 4400 - 8800lbs	1043 mm / 10 in	1500 kg / 3300 lbs
D04HPX	2 - 4t / 4400 - 8800lbs	1045 mm / 41.1 in	1500 kg / 3300 lbs
A06HPX	4 - 6t / 8800 - 13200 lbs	1344 mm / 52.9 in	2000 kg / 4400 lbs
D06HPX	4 - 6t / 8800 - 13200 lbs	1350 mm / 53.1 in	2000 kg / 4400 lbs
T06HPX	4 - 6t / 8800 - 13200 lbs	1240 mm / 48.8 in	2000 kg / 4400 lbs
A09HPX	6 - 9t / 13200 - 19800 lbs	1545 mm / 60.8 in	2500 kg / 5500 lbs
D09HPX	6 - 9t / 13200 - 19800 lbs	1545 mm / 60.8 in	2500 kg / 5500 lbs
T09HPX	6 - 9t / 13200 - 19800 lbs	1240 mm / 48.8 in	2500 kg / 5500 lbs
